Version 9.1.177.5 (Support Release - 25 August 2025)

People Management

People Group list times out (#135875)

Problem

- The people group user list times out after 60s

Solution

- Removal of the CTE (Common Table Expression) and restructuring the query to use a single SELECT statement, which improves readability and potentially performance. Additionally, the query now includes organisation path information directly and sets a longer command timeout for large queries.

Identity and Authorisation

Learningstore redirect gives an error when logging into V10 (#135006)

Problem

- When signing in via the learning store, the we're sorry screen appears. This is caused by the redirect code, which expires in one month
after creation.

Solution

- Added logic to ensure it only expires after 10 years. Also added migrations to update existing redirect codes

Login Report - Not recording reset password login data (#135574)

Problem

- No new login logs are viewable on the report builder

Solution

- Fixed backend User reference

Imports

Import Error (#135543)

Problem

- When a schedule processes the Payspace or PowerShell scripts, the data cannot be staged due to Cannot insert a staging record without a valid OwnerUserId

Solution

- Eliminated the check for a valid OwnerUserId in the UserImportStaging constructor and updated related unit tests. Also added ProcessPayroll job configuration to appsettings.Development.json.

Payspace changes to correct the appointment dates (#134132)

Issue 1

Problem

- Start Date in the company is not mapped from Payspace

Solution

- Map the employment date from the employee status API as the Start Date In Company for import

Issue 2

Problem

- Start Date in the company is not mapped from Payspace

Solution

- Map the employment date from the employee status API as the Start Date In Company for import

---

Learning Management

LMS Portal: Subject Setup: No Cycle 'Weight in Period' Validation (#132285)

Problem

- The weights in a cycle can exceed 100

Solution

- Prevent users from assigning more than 100 total weight to interventions in a cycle, improving data integrity and user experience.
