Version 9.1.184 (22 September 2025)

Ruleset Management

Admins don't have access to the required Integrations screens (#131940)

Problem

- Some admins don't have the required permissions to the Setup and Configuration admin menu -> Integrations

Solution

- Grant admins permissions

Notifications

Students are unable to determine which lesson they need to review based on the absentee notifications. (#136423)

Problem

- The client utilised subgroups across multiple pathway classes, which resulted in the Pathway Group/Class being the same for various pathways. As a result, students were unable to determine which lesson they needed to review based on the absentee notifications.

Solution

- Included the pathway name in the absentee notifications, so students can clearly see which lesson they need to complete

---

Report Builder

Date picker format remains on English (SA) when changing to English (US) (#135930)

Problem

- Date formats were not properly implemented on the report builder and jQuery date pickers.

Solution

- Implement date formats in the report builder and apply them globally to jQuery date pickers. Also added global date format methods for WebMVC JavaScript
