Main Dashboard Implementation Guide

The **Main Dashboard** includes standard widgets that activate by default when the ruleset is created. These widgets provide employees with access to commonly used information and functionality.

The following widgets are activated by default:

- **Kudos**
- **My Colleagues**
- **Our Company Values**

Some widgets are linked to specific modules and become active only when the module is activated. Administrators can also create custom widgets to display organisation-specific content or provide access to external resources.

The sections below explain how to configure the available dashboard widgets, including activating or deactivating widgets, changing widget icons and creating custom widgets.
