

Building your Organisation Structure

In this Section:

- Create an Organisation Structure
- Add Nodes to the Organisation Structure
- Edit Nodes
- Delete Nodes
- Copy Nodes
- View Chart
- Activate the Current Organisation Structure

From Paper to Structure

In this section we will start building an organisation structure into the *Organisation Structure* module.

The assumptions are that:

- You have an approved organisation structure.
- All required node/unit types for the plan have been loaded (See the Configuration and Administration section.
- The required unit type relationships have been defined.

In preparation for building the organisation structure let's review the functionalities that will be addressed in this section.

| OPTIONS ON THE TOOLBAR | |
|--------------------------------|--|
| De-Link Node | <p>Deletes an existing node. If the selected node is linked to more than one parent, only the selected instance of the node is deleted.</p> <p>If a node has sub nodes or positions linked to it a warning message is given and the node is not deleted.</p> |
| View Chart | View a diagrammatic representation of the current organisation plan. |
| Refresh View | Reloads the entire organisation plan, showing all changes. |
| OPTIONS AVAILABLE ON NODES | |
| Add Child | Add a child node directly beneath the current node. |
| Edit Node | Opens an existing node for editing. Also enables a user to view a node's parent and children nodes. If a node that is linked to more than one parent is edited, all instances of the node are changed. (Except for the Valid From and valid To dates) |
| Link Positions | Select and link positions created in the Job Profiling module to a node on the organisation structure. |
| Make this a planning structure | Adds the Company as the child and adds the Company to the list of Organisation Structures. The status of the Organisation Structure will be "Planning" instead of "Active". |

Step 1 – Create an Organisation Structure

- From the portal page, click **System Administration** on the **Administration Menu**.
- Select *Modules | Organisation Structure | Administration | Organisation Structures* from the menu to open the screen below.

No organisation structures have been loaded yet and therefore the list of existing organisation structures is empty.

Click

to open a blank **Plan Detail** screen.

Organisation Structure Detail

 Describe the organisation structure in terms of its VALID period and whether it is to be used as an ACTIVE or PLANNING structure

[List of Organisation Structures](#)

Detail | Nodes

 Save |  Save Add New |  Back

Actions

Ref
Type: Company Structure
Status: **Planning**
Name:
Description:
Valid From:
Valid To: 9999/12/31

 Save |  Save Add New |  Back To List

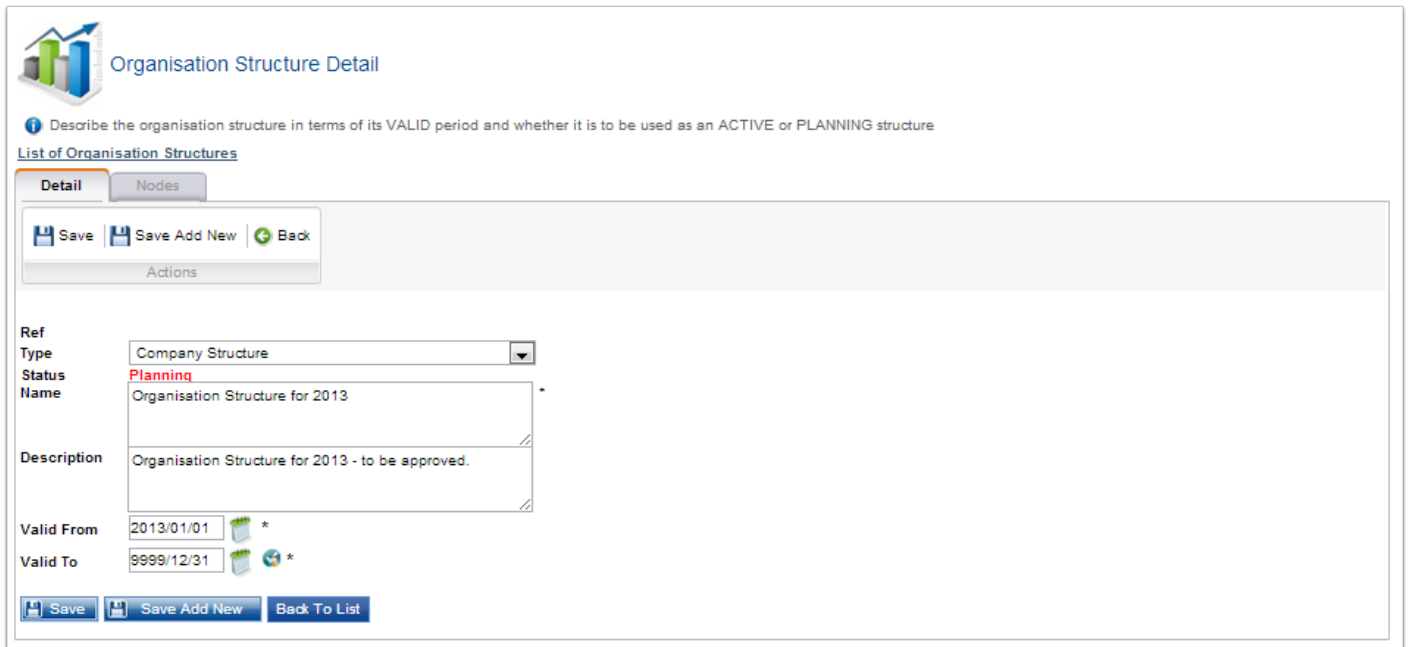

The first node on an organisation plan/structure automatically becomes the NAME of the plan.

- To create the first node on the blank screen above, in the **Ref Type** field select **Company Structure** and provide a descriptive name for you organisation structure.
- Then proceed to complete the other fields.

Valid From and Valid To

For a discussion of the importance and application of the Valid From and Valid To dates, see Section 2.

Valid From and Valid To: For a discussion of the importance and application of the Valid From and Valid To dates, see Section 2.

De-Link Node | View Chart | Refresh View | Print Organisation Treeview | Back To List

Organisation Structure for 2013 [\[Add Child\]](#)

To edit the structure's name (or the first node), click the

tab.

Step 2 – Add Nodes to the Organisation Structure

Our next step is adding the top level of the organisation to the plan.

- Select the node for which you would like to add a new child node – in this case the structure's name.

- Click

to display a blank **Node Detail** screen.

- Set the **Valid From** and **Valid To** date.
- Select the **Type** from the lookup (which is pulled in from the *Node Type* administration screen completed earlier.
- Enter the **Name** and the **Description** of the node.

Click

to add the node to the structure.

The organisation structure now changes to

Edit Node

This function allows a user to edit existing nodes. For this example we are going to change the details of a node.

- Select the node which you would like to edit.

Click

to open the **Node Detail** screen.

- Edit the required fields and, when done, click

to submit the changes.

In addition to viewing the node detail, note that for most nodes another three tabs could become available:

Additional Information

The

image not found or type unknown

tab is used to record any additional information regarding the node that might be required. Information like company registration details, address details etc. All the information is optional so use it only when required.

One section that needs further discussion is the business address.

Business Address

When a business address is provided on an organisation structure level, the implication is that all employees in positions attached to this level should have the same business address. To accomplish this, a scheduled procedure is kicked off to update all employee business address details to the organisation structure level’s business address. A few rules, part of this procedure, are as follows:

- The employee’s business address can be found under **Manage Employees | Employee Profile | Address**
- An employee’s business address is ALWAYS synchronised to that of the organisation structure. In other words any changes specific to the employee’s business address will be overwritten by the organisation structure level’s business address.
- If the organisation structure level’s business address is not available, the next higher level is checked and its business address used if available. If that level’s address is not available the next higher level is checked etc.

image not found or type unknown

Node Parents

Click

image not found or type unknown

to view the parents to which this node is linked. Since this node was firstly linked to the Coal division and then also linked to the Heavy Minerals division two parent nodes are listed.

image not found or type unknown

Node Children

Click

to view the child nodes linked to this node. Currently no children have been linked.

Refresh View

Maintaining an organisation structure on a web page is resource intensive and therefore the screen is not updated after every change. When you have made a change and would like to view the results on the organisation structure as well, click

to refresh the page and render all changes.

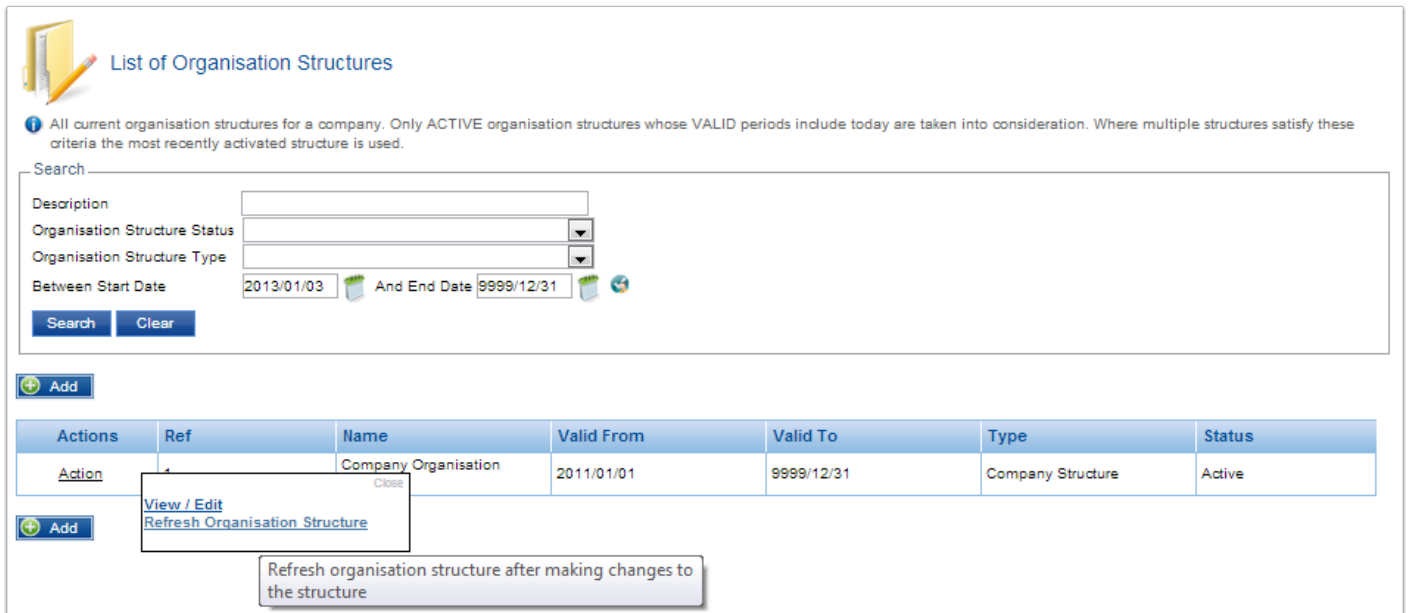

Refresh (Flatten) Organisation Structure

Building a hierarchical organisation structure has many advantages but sometimes there is a need to view the structure in a flat format e.g. for certain types of reports. To accomplish this, a flat structure is derived from the hierarchical structure during an offline process that runs every evening. This process has the following implications:

- Some reports will not immediately reflect a structure change. Changes will only be visible in a flat structure-type report on the day after the changes were made.
- Some functionalities, e.g. moving org structure levels, also rely on the flat structure and need an updated flat structure before it is attempted.
- In many cases a company's subgroups are derived from the flat organisation structure files.

If a user cannot wait for the after-hours, automated flat structure update, an alternative is available.

- Open the Organisation Structure module from **Modules | Organisation Structure**.
- Locate the applicable organisation structure from the list of structures.

List of Organisation Structures

All current organisation structures for a company. Only ACTIVE organisation structures whose VALID periods include today are taken into consideration. Where multiple structures satisfy these criteria the most recently activated structure is used.

Refresh organisation structure after making changes to the structure

- Click the structure's *Action* hyperlink to view a list of available actions.

Click

to manually rebuild/refresh the flat organisation structure.

Refresh Organisation Structure

Use the **Refresh Organisation Structure** action to quickly refresh the structure in cases where an updated flat organisation structure file is needed.

Link Positions

A very important step after creating and finalising an organisation structure is linking positions to the appropriate levels. In this section linking positions will be treated with all its prerequisites and implications.

Prerequisites to Linking Positions to An Organisation Structure

- In the *Job Profiler* module, ensure that a job profile exists.
- Part of building a job profile is creating positions. Ensure that appropriate positions have been created under the job profile.

Linking a Position to An Organisation Structure

If appropriate positions exist in the *Job Profiler* module we can proceed with linking them to our organisation structure.

- On the organisation structure, select the level or node to which the positions will be linked.
- Keep in mind that generally positions are linked to the LOWEST LEVELS of an organisation structure.

Back To List

There are two ways in which positions can be linked to the structure:

- Search for and add the positions one by one.
- From a list of positions, mark all the positions to be added and link them all at once.

Add One Position at a Time

- On the *Position List* screen, click

to open the following screen.

Note the following on this screen:

When the screen opens, only positions NOT YET LINKED to the organisation structure are shown.

Click

to also display positions already linked to the structure. These are displayed as follows.

- Already linked positions cannot be selected.
- If a position happens to have an incumbent, the name and employee number of the person is shown as well.
- The search section makes provision for a user to search both for a position and for a position's incumbent (because a position is more often than not identified by whom it is occupied.)

- Locate the position to be linked to the organisation and tick its radio button to select it.
- Click

Image not found or type unknown

to transfer the selected position to the detail page where the linking can be confirmed.

Note the meaning of the following fields:

- **Valid From** and **Valid To** – Specifies the period for which the position will be linked to the organisation. The *Valid To* date is usually set to 9999/12/31 to indicate that there is no end date.
- **Chief Position** – When a number of positions are linked to a node on the organisation structure, one of them is usually a manager's positions. Use this field to indicate the chief's position.

- Click

Image not found or type unknown

to confirm the position's linking.

- Note that the

image not found or type unknown

tab becomes available. This tab allows you to specify what percentage of the linked position’s expenses will be paid by whom.

Apportionment Costing (Optional)

- Click the

image not found or type unknown

tab to open the following screen.

Organisation Structure

 Back To List

| Node Ref | Node | Apportionment(%) | Delete |
|----------|-------------|----------------------------------|--------------------------|
| 1 | Green Group | <input type="text" value="100"/> | <input type="checkbox"/> |
| Total | | <input type="text" value="100"/> | |

 Save

- Click

image not found or type unknown

to select additional organisation structure levels.

- For each added level specify the percentage of the position's remuneration the level will be responsible for.
- Ensure that the total apportionment for all levels equal 100%.

Linked Positions Shown on the Organisation Structure

After linking a position to the organisation structure, the structure is updated to display the number of positions linked to it on every level. The count can be seen on the screenshot below.

Add Multiple Positions

Add multiple positions all at once, follow these steps:

- On the *Position List* page, click

to open the screen below.

Tick the required positions and click

to transfer them back to the *Positions List* page.

- The *Positions List* page is updated with the new positions but the system does not stay on the *Organisation Structure Detail* page where the apportionment can be done.
- To reach the apportionment each position must be opened individually and their apportionment specified if required.

image not found or type unknown

- Locate the desired position and click on the record to open the *Organisation Structure Detail* page and from there navigate to the apportionment tab.

image not found or type unknown

Once The Positions Have Been Linked And Employees Appointed

In the screen image below a number of positions were linked to an organisation structure node. The next logical step would be to appoint an employee into a position. This is done in the **Manage Employees** module and is discussed in the **Manage Employees** manuals.

After employees were appointed in the positions, the organisation structure's **Linked Positions** screen will reflect the appointments.

If the records are investigated on this screen, the following are not always evident:

 **Organisation Structure**

Moving an Employee With His Current Position To a New Location On the organisation Structure

This action's purpose is to:

- Move an entire position with its incumbent to a new node on the organisation.
- While moving the position and person not cause a transfer record to be inserted into the person's appointment history.

The steps to accomplish this are the following:

- Open the organisation structure and locate the node where the position(s) currently reside.

image not found or type unknown

- Click

image not found or type unknown

for the applicable node to open the following screen.

Linking Positions to An Organisation Structure Is a Prerequisite For...

- Employees can only be appointed in positions that exist and are linked to the organisation structure.
- Only positions linked to an organisation structure can be advertised.

De-Link Nodes

This functionality allows the user to delete a node if there are no child nodes or positions linked to the node.

- Select the node to be deleted as indicated below.

- On the *Actions* toolbar, click

- If the node has no child nodes or positions linked to it, the following message appears where you can click

if this is what you want to accomplish.

- If the node to be deleted has any child nodes linked to it, the following message is displayed, preventing the node from being deleted.

Remove all child nodes and then de-link the node from the structure.

- If the node to be deleted has any positions linked to it, the following message is displayed, preventing the node from being deleted.

- Remove all positions linked to the node and then de-link the node from the structure.

View Chart

This functionality allows the user to see a visual representation of the organisational structure.

Actions

[De-Link Node](#)
[View Chart](#)
[Refresh View](#)
[Print Organisation Treeview](#)
[Back To List](#)

Company Organisation Structure [\[Add Child\]](#)

Green Group (Company Name : 2 Positions ; Code : SD) [\[Add Child\]](#) | [\[Edit Node\]](#) | [\[Link Positions\]](#)

- Select the applicable node and click

to generate the company structure.

Notes on using View Chart

- This functionality is still under development and the correctness and visual appeal can at the moment not be guaranteed.
- If it is useful but be aware that future changes are anticipated.

Move Node

Occasionally it becomes necessary to move an entire level with all its sublevels and positions to another parent level in the organisation structure. Before doing an example, note the following:

- A node/level can only be moved from one parent type to the SAME parent type. In other words if the type of the level to be moved is a company and its parent is a division, then it can only be moved to a parent on the destination structure that is also a division.
- A company’s subgroups are derived from its organisation structure. If an organisational level is moved, that level’s subgroup needs to be recreated. This is done during an automatic, offline process that runs every evening. See the box below for a manual process.
- Another implication of a level that was moved is that users who had access to the level via its accompanying subgroup will NO LONGER have access. They must explicitly be given access to the new level/subgroup. This is done via the normal user administration.
- Open the organisation structure containing the level or node to be moved.
- Note that in our example the level’s type is *Department* and its parent level’s type is *Business Unit*.

- Select the applicable node and click

to open the Node Detail screen shown below.

- Locate and click the

button.

- The following screen opens, showing all potential parent nodes having the same type than the node's current parent node.
- If the anticipated move is to a node that was just added to the structure, the node will probably not be part of the list since this list is dependent on the flattened organisation structure. See an earlier section for a manual procedure to flatten the organisation structure.

- Select the destination parent level and note that only destinations of the *Business Unit* type are shown.
- Click

to apply the move to the destination level.

- The entire level with all sub levels and positions was moved as shown below.

Implications of Moving an Organisation Structure Level

- The subgroup accompanying the moved organisation level becomes obsolete.

- Users who had access to the org level's accompanying subgroup lose their access rights and these need to be reissued on the new subgroup once it is created for the moved level.
- Rebuilding the flat organisation structure is done after hours.
- Use the **Refresh Organisation Structure** action to quickly refresh the structure in cases where an updated flat organisation structure file is needed.

Activate the Current Organisation Structure

The *Organisation Structure module* caters for two types of organisation structures – *In Planning* and *Active*. A user can have any number of plans in the planning or active phase.

By default all new organisation structures are in the planning phase and you have to explicitly activate a plan to make it active. This section describes the steps to activate a plan.

- From the **Plan List** screen, select and open the plan to be activated.

Plan List

Search

Description

Plan Status

Plan Type

Between Start Date And End Date

| Actions | Ref | Name | Valid From | Valid To | Type | Status | Delete |
