

Chapter 2: Roles and Permissions

Successful performance management relies on clearly defined roles and responsibilities. This chapter delves into the module's specific duties of administrators, managers, and employees. You'll learn how each role contributes to the process, from configuring the system and tracking performance to setting goals and providing actionable feedback.

Understanding these roles ensures a collaborative approach to performance management, where every user knows their contribution and how it ties into the system's overall functionality. This chapter sets the foundation for effective teamwork and accountability by clarifying responsibilities.
