

Administrator Roles

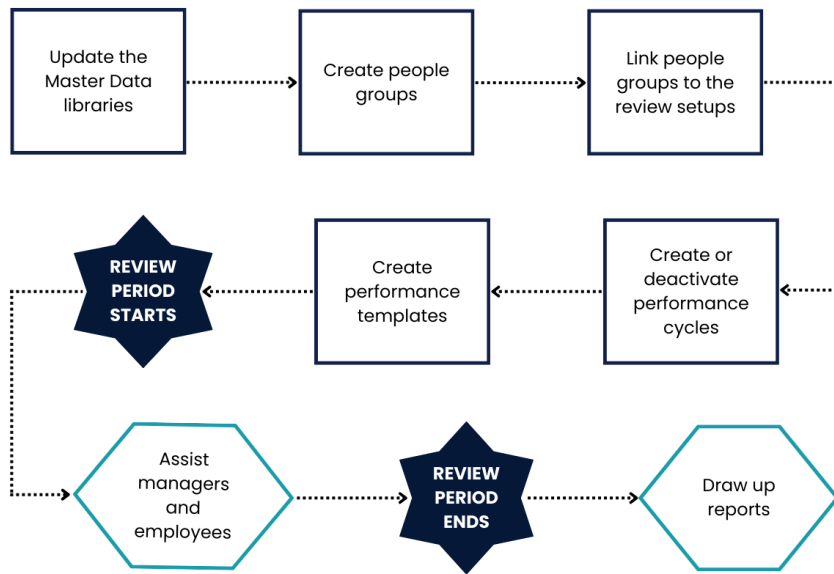

Effective administrators should **manage** and **support** performance **processes** effectively. An administrator has several responsibilities, from configuring system settings to drawing reports, thereby ensuring smooth and accurate performance management.

Several factors contribute to a successful performance management process:

- **Administrators:**

- System accuracy and smooth operation enable an effective performance management process.
- Primary responsibilities include:
 - Managing key data and performance cycles
 - Generating insightful reports for informed decision-making
 - Creating and maintaining agreement templates and review setups.
- This support ensures:
 - A structured and efficient performance management system
 - Clear alignment of reviews with organisational goals
 - A seamless experience for employees and managers.

ADMINISTRATORS
