Version 9.1.108 (16 August 2024)

Performance Management

Text not changed to "Calibrated" (#119122)

Problem

- When the contract has not yet been approved, the precalibrated score is *null.* When importing calibration it only sets the final score and because of the null does not validate against the pre-calibrated score.

Solution

- It was changed to always read the final score and pre-calibrated scores as 0.00 (instead of null) and changed the comparison accordingly.

Improve error message when importing to a period that has not been started (#119120)

Problem

- The error message is not clear when a period has not been started

Solution

- Update the message:
    - The user "[Username]" does not have an active agreement for the review year "[Review Year]" with review setup "[Review Setup]" for period item "[Review Period]"

People Management - Import

User Import: Add additional fields to user imports (#115463)

Problem

- Not all fields that are required are available on the User Import

Solution

- Refactor user import and extend with additional fields

Improve the error when importing an overlapping position (#119083)

Problem

- The error message for an overlapping position needs to be improved

Solution

- Changed the message:
  - "User (Username of person imported), Another appointment exists for the position between [StartDate] and [EndDate] for [Username of person in position]"

Master Data

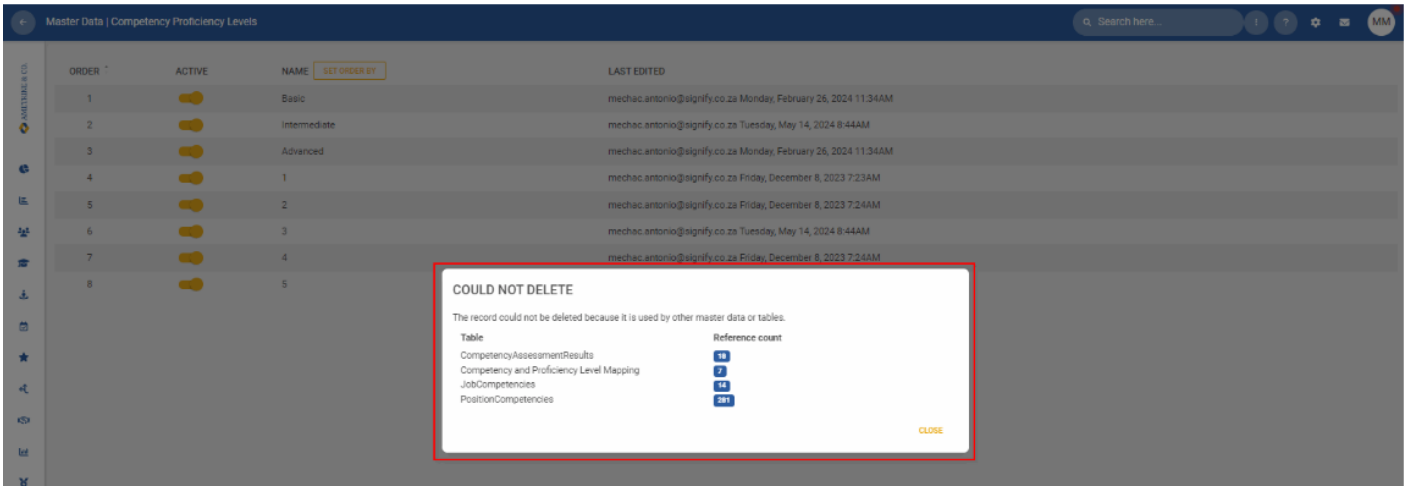

Master Data "in Use" data (#114637)

Problem

- The generic error message displays when deleting master data that is already "linked" to other data

Solution

- Implement a modal to inform the user why he cannot delete the master data item

System Access

Enabled Disclaimer prevents ID Validation (#118639)

Problem

- When the disclaimer is enabled, the 2nd authentication code is not checked for validity.

Solution

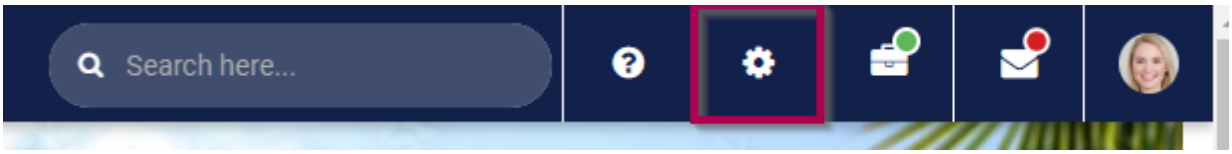

- Run the base authentication. If successful, return the disclaimer SignInCustom. Otherwise, return the authentication result.

System Menu

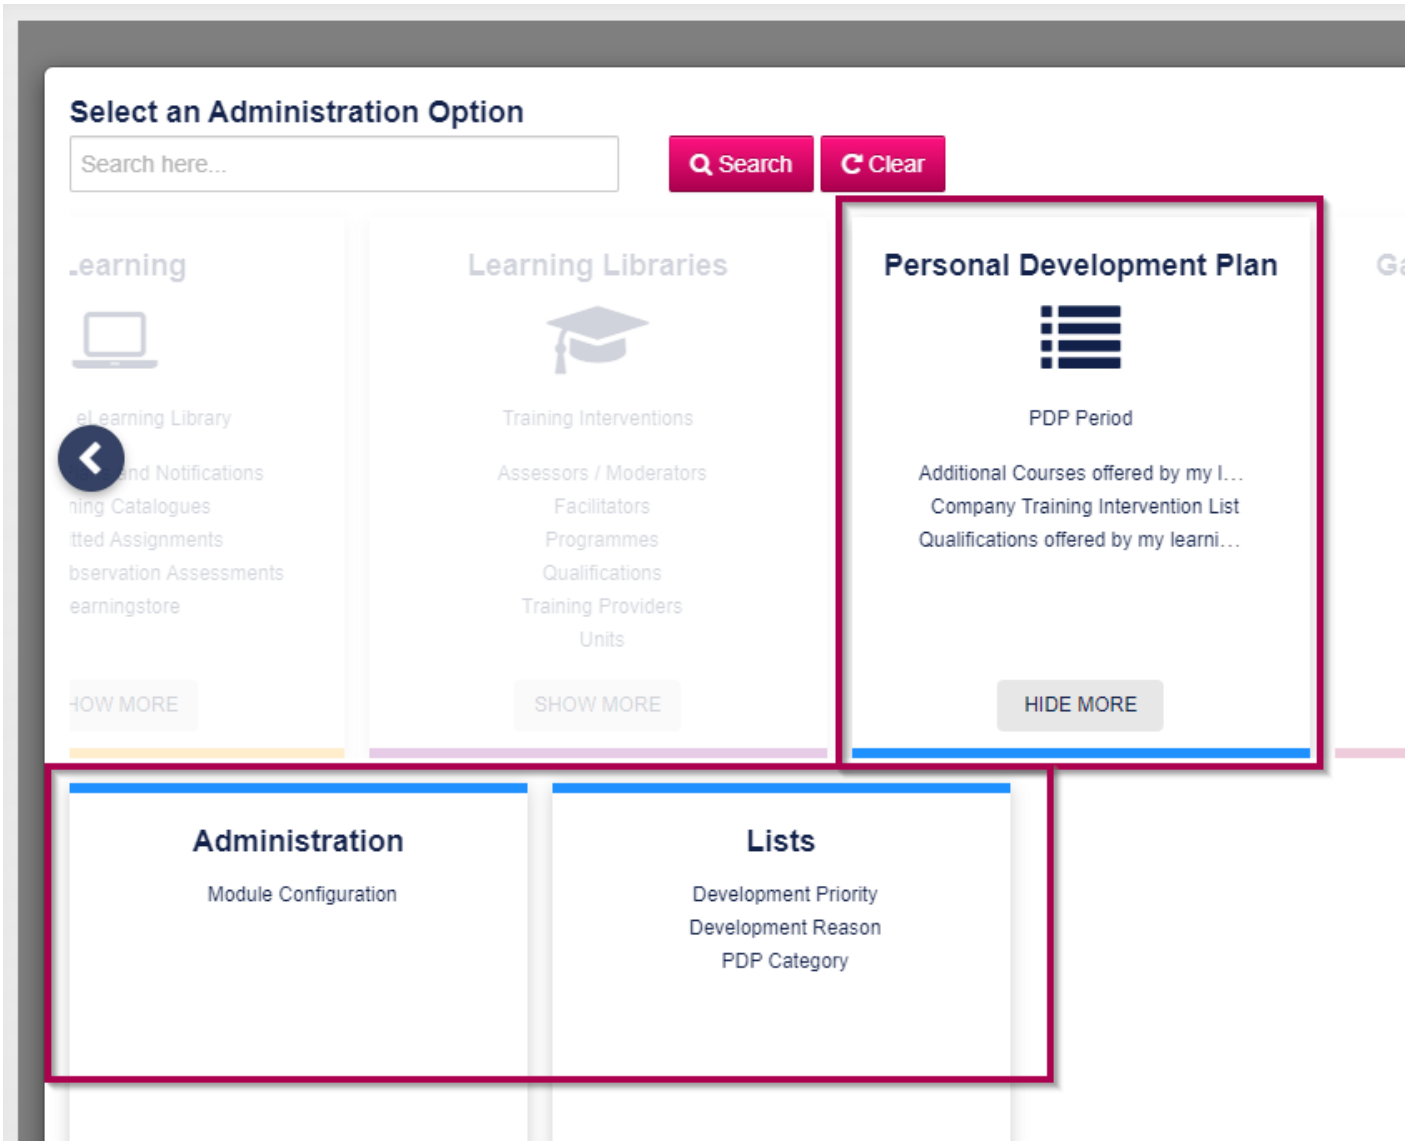

Cannot add the PDP Dashboard on the System Menu (#111669)

On V8:

- Add a Gear for the admin pages - Only available to the PDP Admins

- When selected, open the PDP Admin menu:

V9:

- Add a System Menu for **My PDP**
  - Ruleset Setup | System Menu
- When clicking on the menu item, open the My PDP page
- Add a spanner if the logged-in user is an Admin that opens the admin pages

Kudos

Attempt to translate all sections relating to the Kudos functionality (#119207)

Problem

- Missing translations

Solution

- Add missing translation sections

Ruleset Setup

System help Page not responding (#119246)

Problem

- User guides will show an infinite loading screen when there are multiple rulesets with overridden settings (UserGuideConfigurations)

Solution

- Ensure that UserGuideConfigurations are retrieved for the current ruleset only, which will prevent the infinite loading screen.

Notifications (Inbox)

Order items by date (#118522)

Problem

- Please order the items so that the latest imports are shown first and ensure that it is correctly ordered as dates and not as text.

Solution

- Change the default sort column, and refresh the export table after successfully exporting a report
