Version 9.1.116 (13 September 2024)

Performance Management

Check-in phase - The edit last comments button is not available on the employee check-in screen (#120366)

Problem

- When an employee loads a check-in comment initially (without a manager's comment) that comment cannot be edited. The manager can always edit their comments. Only after the manager's comments were added did the Edit Last Comment button show, although was still not working for the employee.

Solution

- Correct check to show Edit Last Comment relative to whether the user or manager is viewing and has added comments previously. Correct call that updates column to correctly set state after save.

Clicking on the Evaluate button gives an error (#120422)

Problem

- When clicking on an evaluation, it does not open

Solution

- Do not return excluded rating items for evaluations

Identity and Authorisation

When using the welcome email to set your password and selecting the "Back to login" button a white screen is displayed after login (#120252)

Problem

- The back to Login button shows a white screen

Solution

- Fix the Welcome email breaking because of the anonymous ruleset code get
- Add theme key and ruleset code to reset password reset URL and validate reset password token on load

---

Master Data

Race field did not update via employee import (#120325)

Problem

- Race was not implemented to add Master Data when importing users

Solution

- Allow Race to be created as Master Data when importing

Job Profiler

Occupational Level Field gets erased after approx 12 hours (#120301)

Problem

- The problem is that the occupational level is not currently retrieved from V9 with the V9 user import request.
- This resulted in setting the occupation level to 0 (nothing) when the import runs.

Solution

- The syncing of employees to V9 where the employee's occupational level has also been set on V9 Job Profile, should pull through to V8.
