

Version 9.1.123 (7 October 2024)

People Management

Unable to access People Management module (#121118)

Problem

- When a user opens the people dashboards LM is terminated or the LM's position is deleted or inactive the dashboard breaks

Solution

- Change the active check to get the user to use the latest appointment of the user rather than the active appointment.
- Remove the check on the position's deleted or active fields
- Added a catch when loading the manager's data to ensure the people dashboard does not break because the LM's details could not be loaded

The content of the box remains unchanged even though people are filtered on selected subgroups (#121164)

Problem

- On People view when changing the active people group from the dropdown the users are filtered correctly, but the dropdown selected value does not change along with it, it remains on the 1st item.

Solution

- On item change also set the selected option state variable so it sets the selected value on the dropdown correct
-

Theme Management

Menu Portal Language Translation not working (#121198)

Problem

- When the default language on one ruleset is en-US and you open a new ruleset where the default is en-UK the cookie storing the culture is not cleared.
- When a single language is active the cookie is then used to set the preferred language even though it is not active causing incorrect translations to display

Solution

- Clear the cookie when switching theme URLs
 - When storing the preferred language if it is not part of the enabled languages of the ruleset do not store data in the language rather clear the culture to use the ruleset default going forward
-
