Version 9.1.128 (25 October 2024)

Performance Management

Move Employee Scorecard from 1 setup to another (#121906)

Problem

- When a custom people group is linked to an org node that includes a child node it is seen as an org people group rather than a custom. A source review setup that is linked to this custom people group cannot be moved because it is not seen as a custom people group

Solution

- Remove the filter for custom people groups

Report Builder

People Group not applied when exporting report (#121917)

Problem

- Users are included in the people group of org units where they have historical appointments. They are then visible on the PG of the previous appointment org nodes as well as the current active appointment org node.

Solution

- Users should only be included in the people group of the org unit on which they are currently actively appointed.
- Filter the org unit People Group Users select on appointment start and end date

---

Data Warehouse

People Profile Report (#121987)

Problem

- Fields missing when creating a report

Solution

Added the below fields to display under the Appointments

- Occupational Category
- Occupational Level
- OFO Code
