Version 9.1.133 (2 December 2024)

Data Warehouse

As a Report Builder, I want all the new fields available in the DWH (#120979)

Added the HR Processes additional fields:

- Comments
- Special Instructions
- Cancel Reason
- Decline Reason

Import-export (#121920)

- Certain fields/tables will need to be added to the data warehouse to create a report on the report builder that can be used as a template to Import People's Data on V10

Job Profiler sync from V9 to V8 (#121932)

Problem

- Not all Job Profiler fields sync to V8

Solution

- Amend the sync to include:
  - Occupational Category
  - Occupational Level

- OFO Codes

Table consolidation and Data Dictionary cleanup (#121644)

Problem

- There is data in the Data Dictionary tables across tenants
- There are unused columns in the data warehouse tables
- There are tables in the data warehouse that can be combined
- There are columns in the Data Dictionary where the content of the column is unclear
- This requires a rename of the alias of such columns
- Column names do not appear in an expected / logical order

Solution

- Cleanup data so that there is only Data Dictionary data in tenant 1
- Work through all columns in the Datawarehouse and identify unused columns
- Identify tables in the data warehouse that can be combined
- Review all columns and suggest wording where it is not clear what is stored in the column
- Order columns in a logical order
- Ensure data sources appear in their correct categories

Duplicate Reports were created when adding a new report (#110700)

Problem

- Duplicate reports were created when clicking on the tabs multiple times before creating the report.

Solution

- Ensure that only a single report gets created when adding a new report.

Learning Management

Prevent users from clicking the attendance Register link if there's no period (#122073)

Problem

- There is no indication that periods need to be set up
- Error message for period retrieval is the wrong message

Solution

- Add a warning message to indicate periods need to be configured
- Added new message to indicate retrieval error

[Pathways] [Class/Group] [Attendance History] Make sure the horizontal scrollbar is always visible (#123369)

Problem

- The space beneath the card does not match the space on all other sides.

Solution

- Removed the fixed viewport height percentage from `.card-attendance-history` in `AttendanceHistory.scss`.
- Updated `AttendanceHistory.tsx` to add `h-100` class to outer `div` and `MDBCard` component, ensuring they take up 100% of the parent container's height

[Pathways] [Class/Group] [Attendance Register] Teacher / Facilitator shown on attendance register (#123365)

Problem

- LearningAdmin included in Attendance Register and Marksheet page
- Attendance history student order does not match with other pages
- Teachers with Learning Administrator Roles can manage the Master Data

Solution

- Added `IdentityClient` in AttendanceController and MarksheetController.
- Update the Create method signature to include Identity.IdentityClient and call ListUsersLinkedToRolesAsync to filter out Learning Administrator role users.
- Updated the SQL query in `LearningManagementQueries.cs` to order results by `s.Surname` and `s.Name`.
- In `RolesViewModel.cs`, removed the `LearningAdministrator` role from one list of roles with standard permissions and re-added it to the customizable list specifically for when assigning the role to a teacher

[Pathways] [Class/Group] [Marksheet] Reduce padding of the rows in the Setup section (#123538)

Problem

- There is too much padding of the rows in the Mark Setup section

Solution

- Added CSS rules in `Marksheet.scss` to set padding and font weight for table headers and cells within the `#table-marks` element.
- Modified the `Marksheet` component in `Marksheet.tsx` to include additional class names and styles for the accordion header and body.
- Changed the `MDBTable` element to have an `id` of `table-marks` to apply the new CSS rules.

[Pathways] [Class/Group] [Marksheet] Marks displayed in reverse order (#123559)

Problem

- The marks shown are not in alphanumeric order

Solution

- Added ORDER BY `cci.Mark` clause. To order the items by name

[Pathways] [Class/Group] [Marksheet] Unable to retrieve comments error when I open a mark sheet (#123530)

Problem

- Adding a new class or group to a pathway and accessing the mark sheet leads to erroneous data displayed on the UI. This is caused since the data is not yet imported to V9 and the Class/Group is not yet linked to a subject

Solution

- Updated `MarkController.cs` to wrap error messages in an object with a `message` property for `ConfigurationErrorsException` and `RpcException`.
- Modified `Marksheet.tsx` to check for `error.response.data.message` in the `catch` block and conditionally render `ButtonLinkSlider` and `MDBAccordion` based on `navLinks` and `markSetupList` lengths. Added alerts for no-mark setups or students.
- Added new localized messages in `learningManagement.json` for scenarios with no subjects or students

[Pathways] [Class/Groups] [Attendance Register] Able to save when the attendance register has not been configured (#123525)

Problem

- The save and notification buttons can still be used even without periods and students.
- Able to use the send notification button even if the attendances have not yet been saved

Solution

- Added a `disabled` attribute to the "Save" and "Send Absent Notifications" buttons in the `AttendanceRegister` component. These buttons will now be disabled if no students are on the list.
- The notification button will now also be disabled until all the attendances listed on the page have been added to the DB

[Learning Management][Product Setup] Cycle Intervention Setups - Dropdowns not Functional (#123531)

Problem

- When creating subjects with new subjects, the intervention dropdowns are not initiated properly because of duplicate names between cycles. Also, there is a problem editing a cycle. It is treated as a new cycle instead of an existing cycle

Solution

- Use the cycle nr instead of the id for newly created cycles as the id is 0 when created. This fixed the dropdown problem. Also, add action on the cycle modal to properly distinguish between an edit or an add of a cycle as using the id is 0 for newly created cycles.

[Pathways] [Class/Group] [Marksheet] Marksheet shows that a mark was set as manual when it was set as automatic (#123608)

Problem

- The auto setting does not pull through to the mark sheet.

Solution

- Fix argument list in MarkSetupDTO contructor

Tenant Management

Date Picker Defaults set to Future Date rather than currently configured date (#122611)

Problem

- When opening the "edit expiry date modal" the "Current expiry date" is a day after the actual date"

Solution

- Added a fix to convert the date to the correct date so that it is not a day ahead.

Wrong Notification Template used for 1 Day After Notification (#122732)

Problem

- Licence Process Notifications are sent on the wrong dates.

Solution

- Ensure licence process notifications are sent on the correct date.

Activate all products and system menu's according to the subscription when creating the Ruleset (#114394)

Problem

- Menu items not activated from active subscription products on ruleset and tenant creation

Solution

- Ensure menu items are activated from active subscription products on ruleset and tenant creation

People Management

An unspecified error when saving the profile without specifying the required fields (#122954)

Problem

- When the **Citizenship** field is omitted and the user tries to Save the newly added profile, an unspecified error is displayed.

Solution

- Add a descriptive message

Default Banners missing (#123303)

Problem

- The system does not have the Default Banners

Solution

- Display the ruleset 1 banner on the image resources page when the current ruleset has no images uploaded yet

Translations

Performance Management: Implement domain error handling with translation keys (#121935)

Problem

- Domain errors have no translations

Solution

- Replace all the domain errors with translations.
- All messages handled across all the services should show a detailed error on the front end.
- Supported languages:
    - en-US, af-ZA, de, fr-CF, pt-MZ, ar-SA, am

Job Profiler

Search field does not filter Profile Codes (#122768)

Problem

- The Search field does not filter Profile Codes

Solution

- Enable the search field to filter the Profile Codes as it does on the Position page

Report Builder

[Report Builder][Admin User][Date] Changes to date field (#121255)

Problem

- There is only a Date (Default) field available on the fields

Solution

- Change the current one above to Date and time (Default)
  - This time shows as: 2024-10-07T07:30:53.8235783
  - Show as standard date/time function, but aligned to the selected culture and timezone. In the above example, it should be: 2024-10-07 9:30:58
- Add another option for Date only
  - This option must show the date without the time component

Snack message translation missing (#121621)

Problem

- When changing the selection on the People Group drop-down, the message on the Snack Bar is not translated.
- This only happens when the Default Ruleset language is set to the same as the user's preferred language.
- In the example, the user's preferred language is set to English - United Kingdom and the default for the ruleset is set as English - United Kingdom.

Solution

- Corrected the translation issue to display the correct message

SigniChat

Group Members count inaccurate (#121907)

Problem

- The member count shows 3, but there are only 2 people on the members list.
- It appears as though the 'support user' may have been included in the count but does not appear on the list.
- If this person should be on the list, then they need to show as a member, if not, then the count needs to be reduced to 2.

Solution

- Exclude the support user from the user count

Styling on Chat Search box to be made standard (#120691)

Problem

- There is an issue where search events are not bound when going from create chat to the active chat list

Solution

- Fixed the issue of always binding search events when loading active chats

Imports

Import fails when Name and Surname are not required and not provided (#122030)

Problem

- It is possible to make the Name and Surname fields not required on the People Management module configuration. This setting affects the front end as well as the people's import.

- When these fields are not required and you import a user with no name and/or surname, the import fails be cause the back-end still validate these fields.

Solution

- Removed name/surname validation when staging data and not set on ESS as required

Competency Analysis

Add detail to Category when collapsed after rating (#112814)

Problem

- The competency subtext is not correct when all competencies are assessed

Solution

- Ensure the subtext is correct when all competencies are assessed

Additional Competency List displays Competencies linked to the Job Profile (#109846)

Problem

- When clicking on the "Do self-assessment" button and then clicking on the +Competency button for the Additional Competencies modal, will result in an empty dialog.

Solution

- Ensure that the Additional Competencies modal is not empty, after clicking on the "Do self-assessment" button

Notification | Email Setup

Port and Time Out text box labels incorrect (#102607)

Problem

- When the page is displayed, the Port and Time Out text box labels have the border box drawn through the label.

Solution

- Fix the input style

Ruleset Management | Signify Mobile App

As a System Owner, I want to create a web page to embed the bot (#121383)

- Signify created a web page where the bot will be embedded as per the standard sharing capability of Landbot.
