Version 9.1.139.1 (Support Release - 24 January 2025)

Performance Management

PM Interpolation should allow 0 value (#126280)

Problem

- Currently, when rating on Interpolated items, an actual value of 0 (zero) is not allowed, this should however be an option as you might want to have an actual value of 0 tied to the lowest rating

Solution

- Change the interpolation actual value validation to allow zero to be captured as a value. Note that negative values are still blocked.

People Management

Special Characters on Contact Numbers (#126207)

#1
Problem

- Contact numbers can include special characters not caught by the int tel input IsValidNumber validation.
- For example '575-12345' is allowed, however, this breaks the V8 import which is not allowing the numeric values.

Solution

- Strip any special characters from the input, only allow numeric 0 - 9, spaces and '+'

#2
Problem

- The en-GB product unavailable translation still has the contact support@signify.co.za. I was requested to change to contact your administrator

Solution

- Change the translation to "contact your administrator"

Data Warehouse

Report Builder: Add Improvement Strategy Field (#125557)

Problem

- Add the "Improvement Strategy" Field to the report builder

Solution

- Added Data Source "Competency Proficiency Level" to the report builder that also contains the field "Improvement Strategy"

Final Score calibration (#126258)

Problem

- The below fields do not exist in the report builder:
  - Review Year Setup Id
  - Review Item Id

Solution

- Make the Review Year Setup ID and Review Item ID available in the Data Warehouse
