

# Version 9.1.147 (24 February 2025)

## Performance Management

The evaluation Period drop down is emptied when you save/reload (#124214)

### Problem

- The new Evaluation Period field is cleared every time the page reloads, even after saving

### Solution

- Ensure the values are saved correctly even when reloading the screen

Inactive Rating Scale item still taken into account (#127347)

### Problem

- When you configure the PM module with a rating scale of 5, for example, and the 5th rating is disabled, the PM calculation still includes the disabled rating.

### Solution

- Disable the Active toggles when anyone has started rating - same as the delete rule
- Add a tooltip on the disabled Active
  - This rating value is already in use by some agreements
- Also, disable the *Click to add another item*
- When a rating value has not yet been used and you make the item inactive, then this should not reflect as an option on the agreement when rating

---

## Notifications

Schedule Setup: Able to save monthly (days of the week schedule) without specifying Weeks and Days (#86006)

### Problem

- When selecting monthly as a schedule type the "Choose Weeks" and "Choose days" dropdowns did not show. Also validation issues

### Solution

- Issue in the code that did not call correctly on the change event, so a fix for that has been implemented.
- Also added the requested validation styling on dropdowns

Email sent when new ruleset is created contains Reset OTP placeholder instead of actual OTP (#128113)

### Problem

- User authentication and user forgot password used the incorrect placeholder's name for "ResetOTP"

### Solution

- Ensure that those events use the correct placeholder's name.
