

Version 9.1.148 (24 February 2025)

Notifications

Notification sent out based on historical dates (#120742)

Problem

- Licence expiry notifications are sent for inactive subscriptions.

Solution

- Changed query to select only the latest subscription of the tenant

Zoom Connect Credentials not persisting (#128180)

Problem

- Was calling an async method while not awaiting

Solution

- Added await to the call

Add time to Welcome email (#124699)

Problem

- An error is given when the Welcome Notification button on a user profile is clicked.

Solution

- Fixed issue with getTemplates query
-

Ruleset Management

The payroll name is not saving and PowerShell cannot be null (#128236)

Problem

- The payroll connector was not saving due to a prototype not being nullable, and the name field was not saving due to multiple name fields with the same ID

Solution

- Made prototype nullable and chose name field based on visible container.
-

Performance Management

Copy Over Scorecard (#128182)

Problem

- When creating a new contract and selecting Copy From Another, only subordinate contracts for the current Review Year were returned, you then cannot create a contract for someone in the current year from a colleague on a previous year.

Solution

- Fix the query that returns the list of contracts to pull for all previous years, also remove the subordinate ID fetch from JobProfiler and instead rely directly on the materialized table PerformanceManagerUserIds. Made the selection modal scrollable.

Inactive Rating Scale item still taken into account (#127347)

The following changes were made:

- Disable the Active toggles when anyone has started rating - same as the delete rule
- Add a tooltip on the disabled Active
 - This rating value is already in use by some agreements

- Also, disable the *Click to add another item*
- When a rating value has not yet been used and you make the item inactive, then this should not reflect as an option on the agreement when rating

Hide Evaluation Summary Button on Rating Phase (#126277)

Problem

- Evaluation summary button shows in the rating phase for the employee even if the hide evaluation summary setting is on.

Solution

- Added setting test on missed Show Evaluation Summary button

Evaluation Summary Button and Modal Available on Employee Self-Rating Modal (#126278)

Problem

- Evaluation summary button shows in the rating model for the employee even if the hide evaluation summary setting is on.

Solution

- Added setting test on missed Show Evaluation Summary button

PM Module Not Working (#126464)

- 1) 2 offline refresh jobs were still running that I stopped I believe they were holding onto resources
- 2) At the same time 3 update processes were running that were blocking one another, I think the offline refresh jobs may have affected these, once the jobs stopped the processes were completed.
- 3) One of the queries pulling PG info is intermittently slow, although it seems to be fine now. There may be PG changes happening which is requiring refreshes on the PG and affecting the speed of the call. We will have to keep monitoring this, if we do experience significant performance problems again we can investigate further to try and see if we can identify something.

Job Profiler

List pages reverting to page 1 (#126261)

Problem

- When on the job profiler page and I go to page 2 and edit a record and navigate back it redirects to page 1. I want it to remember that I was initially on page 2

Solution

- Implemented a solution to remember the page, save it in local storage and when on the edit page I add the page to the query params of all back buttons and remove it from local storage. Thus it remembers the page but also forgets it when navigating completely away
-

Data Warehouse

Update Start Date in Group & Company; Add Secondary Positions (#121328)

Added the following fields:

- Role Allocation Percentage
- Start Date in Group
- Start Date in Company

Add 2 new interpolation fields (#127243)

Two additional Interpolation actual value fields have been added, one for the Employee's Actual Value and another for the Manager's Actual Value.

The previous Interpolation Actual Value field now serves as the Final Actual Value.

The following 2 fields were added:

- InterpolatedManagerValue
- InterpolatedUserValue

Adjust DWH deployment workflow for V8 DWH packages (#126906)

Problem

- Workflow can only deploy V9 DWH packages

Solution

- Adjust workflow (by adding a dropdown for V8 database names) to deploy V8 DWH package.
-

Employee Import

Error on People Group Import Request under Integrations (#127998)

Problem

- The prevented import translation is not shown when requesting bulk imports within 5mins from each other

Solution

- Add logic to show the message when forbidden
-

Learning Management

No error detail if absent notification cannot be sent to Parent/Guardian (#123832)

Problem

- No indication anything is wrong only an empty cell within the columns email, name and surname

Solution

- Updated LearningManagementExportService to handle cases where recipient details (email, name, surname) might be missing by using localized strings.
-

Revision #3
