

# Version 9.1.148.1 (Support Release - 26 February 2025)

## People Management

Error after appointing a new person (#128545)

### Problem

- When appointing a new user, the people groups are not busted in time of the profile page load due to eventual consistency

### Solution

- Move the busting to the job profiler service to bust the masterialised cache in the service first and then all the rest of the services.

---

## Learning Management

No error detail if absent notification cannot be sent to Parent/Guardian (#123832)

### Problem

- No indication anything is wrong, only an empty cell within the columns email, name and surname

### Solution

- Updated LearningManagementExportService to handle cases where recipient details (email, name, surname) might be missing using localized strings.
