

# Version 9.1.164.2 (Support Release - 5 June 2025)

## Performance Management

### Performance Management: Incorrect Total after 10/10 Self-Rating and Error on Submit Final Rating (#131647)

#### Problem:

- The scores within ContractPeriods do not round correctly when they round to above 100
- Due to the increasing number of KPIs and the distribution of their respective weights, there is a potential for precision-related discrepancies during the selection and calculation of the final rating. As a result, the computed value may appear as 10.001 instead of the expected 10.
- The final ratings could not be submitted due to the system not accommodating a score of 100.0000, which resulted in a submission failure

#### Solution:

- Adjusted the rounding issue for ContractPeriods scores to ensure it does not exceed 100
- New logic was implemented in the score calculation to allow for slight overcalculations, which are then adjusted to the appropriate floor value.
- The system has been updated to allow for larger max rating scores.

### Path to link Signify to Power BI (#132335)

#### Problem

- An additional api required to export all user contract data for a review year and review setup

#### Solution

- Create a copy of rpc ListReviewYearSetupUserContracts (ListReviewYearSetupUserContractsRequest) returns (ListReviewYearSetupUserContractsResponse); and extend to include all users
  - Include location in org
  - Remove image path for performance
- 

## People Management

### [My Profile] Error shown when user clicks on My Profile (#132878)

#### Problem

- When a user who does not have an admin role tries to view their profile, the page breaks. The problem is that it tries to fetch the active products for the tenant/ruleset, but the call to get ruleset information is admin-authorized only.

#### Solution

- Changed to get the tenant ID from the available anonymous call, which is then used to fetch the tenant subscription information.
- 

## Imports

### PaySpace Signify discrepancy script (#129254)

#### Problem

- When data is not staged in the user stagings for an import, then the exported Excel sheet is broken without data.  
Data fields are inconsistent in the export

#### Solution

- Add a check to export a default error
- Add a cast to shortdatestring for datetime and datetime? fields

## Person not updating via Import (#132260)

### Problem

- When the Payspace client does not grant access to the OrganizationPositionDetail, then the following API call fails as forbidden
- string url =  
`${connector.BaseUrl}/v1.1/{companyId}/OrganizationPositionDetail?$count=true";`

### Solution

- Add try catches when pulling data for the OFO code to suppress and log the failure should it occur, and then continue with the import

## V9: Import Issue (#132815)

### Problem

- When providing other data in the import for org level 1 than the default IN01 data, the import fails with the error: The org node to link the user's position to could not be found."

### Solution

- Add org level 1 as received data, and fall back to the default only when no data is provided
