

# Version 9.1.168 (30 June 2025)

## Performance Management

[Recalculate Scores] Results include deleted contracts (#133399)

### Problem

- Deleted contracts are being retrieved when selecting the contract to recalculate

### Solution

- Exclude deleted contracts

[Recalculate Scores] Search filters reset after recalculation (#133038)

### Problem

- When agreements are selected to recalculate, selections are cleared because the new score might not show directly.

### Solution

- Add a message indicating that recalculated scores can take up to 5 minutes to display

Key Competencies do not get highlighted when scrolled to (#133092)

### Problem

- When the user is in the check-in phase and scrolls down, it does not hit the last section and highlight the nav menu on the left

## **Solution**

- Resolved case to increase offset to ensure the section gets hit to highlight on the nav menu

## Linked setup items go over the edge of the card (#120465)

### **Problem**

- When the Review Setup name or description has a lot of content, it pushes off the columns to the right, which causes the page to have a scroll and not be within the card

### **Solution**

- Add a new wrapper around to scroll within the card, and not allow the page to grow horizontally.

---

## **Tenant Management**

### Unable to delete the tenant, which could not be created from the list (#133126)

#### **Problem**

- We were unable to delete a tenant that could not be created from the list due to the delete modal not being initialised correctly at times.

#### **Solution**

- Remove the data-mdb-toggle="modal" and data-mdb-target tags from the button to ensure that the modal always initialises and displays correctly (this causes the modal to display automatically without having to bind a click event). Also, bind the click events directly on the document so that we don't have instances where we try to bind the event before the elements are rendered on the page.

---

# Report Builder

## Condition button missing on first Filter By entry (#133101)

### Problem

- The **Condition** button is removed from the first **Filter By** entry on the **Filtering** canvas.

### Solution

- Move the condition column to the left

---

# Learning Management

## [Shared Links] Links do not open the Pathways (#132844)

### Problem

- Shared Pathway links don't open but give a Not Found error. This is caused by a malformed URL.

### Solution

- Avoid adding empty redirect URLs to the query string because it causes the query string to have duplicates. Duplicates create an invalid resulting URL.

---
