

# Version 9.1.188 (13 October 2025)

## People Management

Virtual Tour not shown even though it has been set up on RS1 (#137702)

### Problem

- When a virtual tour does not exist for a ruleset, it must default to ruleset 1, and if it exists, the visibility type should determine which tour to display. Incorrect tours are being displayed based on the visibility type, as when a user opts out of their ruleset, the SQL falls back to ruleset 1.

### Solution

- Alter the SQL to apply the correct validation
