Version 9.1.194.1 (Support Release - 13 November 2025)

Performance Management

Time out while doing performance reviews (#140297)

Problem

- The lock backdrop stays on the page after clicking the Continue button; contract locking is not working properly

Solution

- Extend the timeout period if the button is clicked, and handle the backdrop accordingly

---

Imports

MultiV8 Userimport Investigation and corrections (#139670)

Issue 1

Problem

- Valid emails are seen as invalid and rejected in the import

Solution

- Updated EmailHelper to support RFC 6532 (EAI) and internationalised domain names (IDN), allowing Unicode characters in both local and domain parts. Improved regex patterns for local and domain validation, and expanded unit tests to cover a wider range of valid and invalid email formats, including Unicode, apostrophes, and domain literals.

Issue 2

Problem

- Inactive tenants' rulesets are still processed even though the tenant is disabled

Solution

- Include a join on active tenants when rulesets are selected to process

---

People Management

Add a new subject to the subject list and link it to a year, grade, alias, and colour (#135199)

Problem

- The delete confirmation function on multiple administration pages, which does not require a reason from the user, is not working.

Solution

- The backend logic handler has been fixed to ensure that modals without a user reason still function properly.
