Version 9.1.202.3 (Support Release - 14 January 2026)

Performance Management

Cannot edit section weights on the contract (#143437)

Problem

- Unable to edit section weights on a contract due to the missing primaryContract parameter not being sent from the frontend.

Solution

- Added missing parameter

Cannot delete action plans (#143402)

Problem

- Unable to delete action plans due to a missing primary contract parameter required for authentication

Solution

- Add required parameter

Issue when adding/editing action plans (#143402)

Problem

- Error received when trying to add or edit action plan items. Bug due to recent additional contract development

Solution

- Resolve missing parameter not sent through when adding / editing / copying action plans

---

Job Management

Issue with Job Inherent Requirements incorrectly updating when rating on competency analysis (#143362)

Problem

- When rating competency for a user for Job Inherent Requirements, if multiple requirements of the same Master Data type exists all corresponding records for the same type are updated incorrectly.
- Picked up a design problem where for the Job Inherent Requirements, multiple requirements per type can be added; however, for the analysis, the Job Competency Inherent Requirements entity is incorrectly linked to the master data record instead of the job inherent requirement record, resulting in a user can only ever have one requirement per type.
- Front-end and backend allow for working with multiple per type, but cannot distingush on the record level to which Job Inherent Requirement it is linked, and as per the issue on request updating one record leads to all of the same type being updated.

Solution

- Remapped the Job Competency Inherent Requirement to the Job Inherent Requirement and updated all references accordingly.
