Version 9.1.212 (4 March 2026)

People Management

Resolve issue with ESS settings not correctly reflecting (#145003)

Problem

- Self Service settings are not correctly displaying, everything shows as disabled. When viewing user profile indicates that no self service settings have been configured.

Solution

- Admin / Ess view and edit values are not correctly retrieved leading everything to default to false. Corrected the fetch so that it correctly maps the view and edit options from the database. Additionally moved the selfservicesetup cachepattern to the shared location. Also on the BustAllRulesetCachekeys it was only looking at patterns that start with 'RS{0}_CacheKey', but for self service setup the pattern starts as 'sss' so it never gets removed from cache, unless you physically update the cache settings. Now when cache is fully busted will also refresh ESS.

Resolved user not being able to edit his own details (#144785)

Problem

- Logged in user could not edit his own details Particulars and Biographical shared same checks

Solution

- Added LoggedInUser check Split out particulars and Biographical

Implemented update to also take into account self service id validation (#143993)

Problem

- When an id number is updated within personal details it is not taking into account the validation settings Duplicate methods on self service and misleading method name on the one call

Solution

- Add new implementation to take into account id validation refactor duplicate calls and correct the duplicate models

---

Job Management

"Do basic self-assessment" icon not clickable (#144469)

Problem

- Event listener was never triggered

Solution

- Move to only instantiate directly after the data has been loaded

Manager cannot view subordinates Competencies (#144468)

Problem

- No development exists to trigger on click event

Solution

- Added new event listener to be triggered when row click to navigate to users analysis

Resolved evidence being cleared when deleting content (#144784)

Problem

- When deleting an evidence file, the modal reloads but with an empty list. Missing Competency Inherent Requirement id

Solution

- Add missing id value - pass through to reload evidence

Performance Management

Updated some of the translations (#144980)

Problem

- Received a request to update some of the PM translations.

Solution

- Updated the translations to the requested wording.

Modification to Popover rendering as attempt to resolve screen flickering when popover is triggered with hover/focus (#144966)

Problem

- When hovering over some elements that have a popover, it continuesly re-renders and the popover flickers, as if it's visibility state is constantly changed. This does not happen locally only on Master and on UAT.

Solution

- Memorized the popover properties so that it does not re-render when anything else on the dashboard changes. Found additional issue where for a fraction of a second the popover is shown topleft of the viewport before it positions where it's supposed to. Enforced additional css onto the popover to attempt to prevent that from happening.

Fix rendering of dashboard buttons (#144937)

Problem

- The dashboard buttons display both the start text as well as the accessibility text.

Solution

- Fix the rendering of the buttons to not show the accessibility text

Resolve issue with additional agreement button displaying when user does not have primary agreement (#140461)

Problem

- Add additional agreement button shows when impersonating user and user does not yet have a primary contact, and user is only on a single review setup.

Solution

- Ensure additional agreement button is correctly hidden when user does not yet have primary contract.

Resolved redistribute of weight when VB section removed (#144781)

Problem

- When a user is not a manager it removes the VB section and redistribute the weight, on some values this cause a total of 1.0001 which throws the exception

Solution

- Add a tolerance to skip exception and navigate within the existing recalculate case

Ensure only one import is logged per ruleset when importing surveys from v8 (#142910)

Problem

- When importing surveys from V8, an import was logged for each contract instead of one per ruleset.

Solution

- Ensure only one import is logged per ruleset when importing surveys from v8

System Access

Hide kebab menu for non-admin users (#144389)

Problem

- Kebab menu shows for non-admin users

Solution

- Hide kebab menu for non-admin users

Notifications

Updates to query getting subscription notifications (#144635)

Problem

- When the expiry date and close date are the same, the system sends notifications after the close date, and in some cases two mails on the same day.

Solution

- Move the "2-day prior to expiry" check to a "3-day prior to expiry", and ensure no mails are sent after the system close date. This way 2 mails will never be sent on the same day

---

Ruleset Management

Can't change icon of dashboard widget (#145007)

Problem

- Can't change icon of dashboard widget

Solution

- Drop down button did not have a 'dropdown-toggle' class

Paging Styling (#145006)

Problem

- Pagination buttons did not make use of the secondary color, but rather the primary color

Solution

- Ensure pagination buttons makes use of secondary colors

White background on Search bar (#144998)

Problem

- White background on Search bar when autocompleting

Solution

- Override autocomplete styles so that it fits original style

White backgrounds on Text input fields (#144997)

Problem

- White backgrounds on Text input fields

Solution

- Override autocomplete styles so that it fits original style

Back Button styling issue (#144905)

Problem

- Back button text in certain instances were not white

Solution

- Ensure that the text is white (when using tertiary button)

Styling issues on People Admin page (#144815)

Problem

- Pagination displayed underneath tables even if there are not enough items for paging to apply

Solution

- Global conditional pagination helper made use of outdated mdb table classes, ensure the new class selectors are used.

Correct first selection not being set on image resources (#143713)

Problem

- New change implemented in account to not set first selection but not added within image resources Suggestion to clear tags after file change

Solution

- Pass true value Add clear Keywords

Data Warehouse

Adjusted script C_03707_99999_monReportBuilderDataIntegrityResults to only return error messages (#142737)

Problem

- The ReportBuilder IntegrityResults results return for all the reports which can take time to go through report

Solution

- Adjusted script C_03707_99999_monReportBuilderDataIntegrityResults to only return error messages

Added field UniquePersonLoggingDays within accUserLoginStats (#144473)

Problem

- Field UniquePersonLoggingDays is required within accUserLoginStats

Solution

- Added field UniquePersonLoggingDays within accUserLoginStats
- Implemented Performance Improvements with V8 and V10 calculation Scripts for accUserLoginStats

Added step to exclude any cm tables from Data Dictionary (#143697)

Problem

- Currently any cm tables are added to the Data Dictionary

Solution

- Added step to archive any cm% data sources and their fields in ReportBuilder tables

Created new DataSource cmZipFolderContents (#143697)

Problem

- New Datasource is required to store the movies and zip folder information

Solution

- Created new DataSource cmZipFolderContents

Learning Management

Adjust dropdown sizes and exclude start and end date from year dropdown (#144958)

Problem

- The Year dropdown has regressed into the Date Range of the Master data item rather than the associated label and the size has been adjusted and is no longer legible.

Solution

- Adjust dropdown sizes and exclude start and end date from year dropdown.

Imports

Resolved performance issue with the export of users via the API (#144570)

Problem

- When ListUserExport is called during the V9-to-V8 user import, it sends all user IDs to a batched Dapper query. This is a query that becomes heavy and slow on a large group of people to export (60k+)

Solution

- Replace dapper batched logic with SQL bulk copy to a temp table for efficiency.

Report Builder

Resolved Filter values showing Incorrect Date (#144246)

Problem

- Development was added to have dropdown values of like 'Today' 'Next week' but when viewing the report that is marked as an invalid date

Solution

- Add FilterValue to be converted based on this data to the correct values

---

Event Scheduler

Fix the event calendar from either going blank or disappearing when a reason is selected, or an event details are viewed (#144947)

Problem

- The event calendar is going blank/disappearing when a reason is selected, or an event details are viewed.

Solution

- The event calendar is going blank/disappearing when a reason is selected, or an event details are viewed. Note: The peopleManagement translation wasn't loaded into memory yet, so it only loaded when the BookOthersModal component mounted, after the event details was clicked. It then goes into suspense mode, and throws a promise while it's busy loading the translation, react suspends rendering and looks for the nearest Suspense component. It wasn't finding the higher level Suspense components for some reason, so adding a React.Suspense component around where the BookOthersModal component is loaded, fixes the issue.

Content Management

Resolved Data Annotation for Online Marking (#141344)

Problem

- Online marking stamps not behaving correctly when trying to move, or when moving across page, creating ghost elements

Solution

- Refactor logic and code after syncfusion upgrade, corrected behavior and page move
