

Version 9.1.215.3 (Support Release - 11 March 2026)

Performance Management

Ensure Bulk Recalculation Errors are properly logged, and the batch status is correctly updated (#144245)

Problem

- When bulk recalculations fail due to an unhandled exception, the batch status remains unprocessed, and the items don't indicate the failure.

Solution

- Ensure bulk recalculation failures are properly logged and status updated.
- Also had to change how the datatables are destroyed/cleared, which has changed with the latest versions.

Learning Management

Resolve TinyMCE warning displayed and editor disabled on absent notification email modal (#146211)

Problem

- When trying to send absent notifications, a warning is displayed, and the tinymce editor is displayed.

Solution

- Explicitly state the GPL licence key usage on the React editor component.
-

Revision #2
