

Version 9.1.232.4 (Support Release - 3 June 2026)

Performance Management

Corrected view subordinate button no longer displaying on dashboard (#148720)

Problem

- On the Manager Dashboard, the View Subordinates button was no longer displaying for employees who are managers.

Solution

- Corrected dashboard query that was incorrectly determining subordinate count by looking at the current user's manager instead of the current user's reportees.

System Access

Ensure the provider is set for support login (#148127)

Problem

- Provider not available in support login, causing an incorrect redirect on challenge

Solution

- Add a hidden provider input and update client-side submit logic to populate it from the clicked submitter so the provider value is consistently sent with the form.
- Also, add a server-side fallback in OnPostAsync to default the provider to Microsoft when none is provided.
- This ensures the provider is always available for processing (covers cases with/without JS and relies on submitter value when multiple provider buttons exist).
