

Version 9.1.250 (17 August 2026)

Performance Management

Confirmation modal not opening when submitting evaluations. Fix date pickers in review setup (#153492)

Problem

- In PM Review setup, the date input styling for the phase dates was broken
- In PM Review setup, the period start date is automatically focused and expands the calendar control
- When evaluating others, the submit button does nothing.
- A console error is displayed indicating the error relates to mdb not loaded.

Solution

- Resolve issue introduced by previous fix that caused the flatPicker functionality to override/mask the mdb input / floating functionality.
- Exclude flatpicker inputs from the auto-focus functionality on the global input element handling. 3. Added the missing jQuery shim file to EvaluationLayout; also added a guard to try to handle modal opening better.

Data Warehouse

SendReminders Field added to accDocuments (#154384)

Problem

- Needed the SendReminders field in report builder

Solution

- Added SendReminders field in accDocuments

Added CAST function for jpHRProcessRequestPivotData (#142737)

Problem

- The step failed if NVARCHAR values exceeded 2000

Solution

- Added a CAST function for the jpHRProcessRequestPivotData Staging Insert step to resolve the error

Resolved error within UpdateDataDictionary SSIS Package (#153855)

Problem

- Currently, the package fails within UpdateDataDictionary due to a SQL error with the step Update Existing DataSourceJoins

Solution

- Resolved the SQL error for the step Update Existing DataSourceJoins within UpdateDataDictionary

Created datasource accDocuments (#139797)

Problem

- Need to create a “Document Signature Outstanding” report , which requires additional fields in the DWH

Solution

- Added required fields within datasource Documents

Updated Insert step for jpAppointments (#154027)

Problem

- Currently, for jpAppointments, it only refreshes appointment data for the current year. But it does not consider other tables it joins

Solution

- Updated Insert step for jpAppointments to also check for records that have been updated this year for other tables that the insert query joins

Added ReviewYearSetupID within pdmContractPeriods (#153887)

Problem

- Field ReviewYearSetupID needs to be added within pdmContractPeriods

Solution

- Added field ReviewYearSetupID within pdmContractPeriods

Auto Doc

Fix signed-on Date/Time field shown as UTC instead of local (UTC+2) time (#154309)

Problem

- Signed-on Date/Time field shown as UTC instead of local (UTC+2) time

Solution

- Resolve the timezone from webmvc, where it is available from the request cookie and not from the contentmanagement service

Fix lines on Signature misplaced once employee has signed document (#154318)

Problem

- Lines on Signature misplaced once employee has signed document

Solution

- Ensure that the signature displays on top of the line and not over it

Fix user receives notification for unsigned document where template has been removed (#154298)

Problem

- User receives notification for unsigned document where template has been removed

Solution

- Ensure Send Reminders is disabled when the template is deleted

Ensure list documents does not fail when category master data was deleted (#153873)

Problem

- List document templates for autodoc fail when the category master data was removed or does not exist anymore for some reason

Solution

- Default to an empty string if category master data cannot be found
-

Event Scheduling

Ensure the user can assign themselves as coordinator (#153720)

Problem

- User cannot assign themselves as the event coordinator.

Solution

- Ensure the user can assign themselves as the coordinator
-

Job Management

Fix disclaimer enabled on Job Title set to show on Registration page is not being displayed when the job is selected (#153407)

Problem

- Disclaimer enabled on Job Title set to show on Registration page is not being displayed when the job is selected

Solution

- The disclaimer does not display because the incorrect query was called, which expected a user ID, and the code incorrectly sent the job profile ID. Add a query which expects a job profile id and use that query instead to determine whether a disclaimer should display
-

People Management

Add a check when creating new reporting line people groups to only users that already exist on the same type of people group (#153696)

Problem

- All line managers who do not yet have a reporting line people group

Solution

- Limit the query to include only reporting line people groups in the filter of existing people groups to exclude

Imports

Add Recompile option to Simplified Users Export query (#154101)

Problem

- Simplified users export query can at times run excessively long when the query plan has been cached, and we run into parameter sniffing issues.

Solution

- Added the option to recompile the simplified users export query to ensure the plan is not cached and is recalculated each run. Execution time went from >2 mins to +-4 seconds.

Learning Management

Add borders and a calendar icon to cycle Start/End date fields (#153968)

Problem

- The Start Date and End Date fields in the Add/Edit Cycle modal (Subject Cycle Detail setup) had no visible border or calendar icon, making them inconsistent with other bordered form fields and less discoverable as date pickers.

Solution

- Wrapped the Start Date and End Date inputs in a bordered input-group and added a calendar icon (``fa-calendar-alt``) to each field.
