

Version 9.1.250.3 (Support Release - 10 September 2026)

Communications

Removed border radius from button (#154525)

Solution

- Removed the border radius added to button

Added backdrop shadows for comms portal and system message (#154521)

Solution

- Added backdrop to comms portal
- Added backdrop to the system message modal centered and changed the z-index of the different backdrops

Resolved DateTime differences (#154595)

Problem

- When the banner dates are saved, they were configured on the client timezone and saved accordingly, but all other calculations are assumed that it saved in UTC

Solution

- Added a fix to convert back to UTC when saving and, when showing, convert again from UTC

Set default width starting point of banners (#154511)

Solution

- Added a change to increase the default width

Added image upload for system messages (#154601)

Problem

- When adding an image to a system alert/message, the image is never actually uploaded.

Solution

- Correctly handle uploads using the "Insert Image" control and pasting an image into the RTE.

Revision #1
