

Version 9.1.254.1 (Support Release - 7 September 2026)

System Access

Correct external menu routing for additional services general and deep link types (#155499)

Problem

- General external pages returns an error Deep link external pages does not correctly authenticate

Solution

- Updates menu URL generation to route AdditionalService deeplinks through encoded redirect paths, and adds explicit handling for MenuType.General to support external redirect/service links more consistently. It also broadens ruleset menu previews to include all external menu items, not only those missing an external code.

Revision #1
