

Version 9.1.254.2 (Support Release - 8 September 2026)

Performance Management

Fix review document handler logger dependencies (#155503)

Problem

- Opening Portfolio of Evidence files from KPA or KPI rows returns "Invalid identifiers" because the review-file handler cannot resolve its logger dependency.

Solution

- Use the registered generic logger in the affected review-file handlers and add dependency-injection coverage for all review-file query handlers.

Revision #1
