Version 9.1.53 (4 December 2023)

Identity & Authorisation

Corrected incorrect login using Microsoft when the same provider and key is used for a user on different rulesets (#110250)

A user login in with Microsft using the same provider and key on different rulesets, will now log into the correct ruleset.

API

API Configuration (#110046)

Add API configuration to master data, report builder and audit services.

Main Dashboard

Open PM with correct Header from widget (#110263)

When redirected to Performance Management, the header now shows correct.

Next Action label (#110261)

Ensured that the Next Action label is not wrapping.

Continue Button (#110263)

The continue button redirects to Performance Management in the same tab.

Imports

API User Import (#109726)

Implement the API User Import and cebtralised validations.

Ruleset Setup

Copy Data (#107442 & #85116)

Implement the copy of Report Builder and Performance Management data when a new ruleset is created or copied from.

Performance Management

Label Change (#110243)

Change label from Overall Final Score to Overall Status when Hide Scores setting is enabled.

Review Setup details (#110241)

Always redirect on Review Setup details when settings have updated to show the changes.

Review Sections | Action Plans (#110235)

Remove the hide scores label in the section.

Review Items | Review Surveys (#110231)

Remove max score check on Review Survey constructor, validation is done when adding a new review item.

Master Data | Inactive Perspectives (#110200)

Disable inactive perspectives when completing contract.

PM Template Import (#106913)

Implement the functionality to import Templates when the Hide Scores setting is enabled.
