Version 9.1.82 (12 April 2024)

People Management

Enable viewing of terminated people (#114144)

Problem

- Unable to access a terminated person's profile

Solution

- When accessing terminated users, it will now first use the people linked in the cached people group and if the user is not found, generate the people group as uncached for all people.
- This should then find all the people you will currently see when applying the all filter on the grid view of the people management dashboard.

Performance Management: Import

Correct the mapping of weights (#113327)

Problem

- All section items are imported with the section weight and not the item weight.

Solution

- Update the mapping in the value and behaviour and competencies imports to use the section item weight as supplied by the import sheet.
