

Version 9.1.88 (20 May 2024)

Notifications

Prevent overriding notifications data that has changed on other rulesets (#115416)

Problem

- The notifications have been restored to default and not showing the custom information

Solution

- The ruleset propagation of template content from R1 has been disabled
- Script correction for the syncing of content when it has not changed

Imports

Cannot import PM Template (#115150)

Problem

- The current problem is that this causes the message to only show the part after the : and not the whole message.

Solution

- The change should allow the error messages for the template import to show in full when the template name has a : in it.
-

Performance Management

No KPIs are shown in the list when Select from library (#115120)

Problem

- No KPIs are shown in the list when Select from library

Solution

- Changed the ordering of master data items when using cursor-based paging to use the display order when ordering items rather than the primary key
