

Properties

- Use dot notation when accessing properties.

```
const luke = {  
  jedi: true,  
  age: 28,  
};  
  
// bad  
const isJedi = luke['jedi'];  
  
// good  
const isJedi = luke.jedi;
```

- Use bracket notation `[]` when accessing properties with a variable.

```
const luke = {  
  jedi: true,  
  age: 28,  
};  
  
function getProp(prop) {  
  return luke[prop];  
}  
  
const isJedi = getProp('jedi');
```

- Use additional trailing commas for cleaner git diffs.

```
// bad  
const hero = {  
  firstName: 'Dana',  
  lastName: 'Scully'  
};  
  
const heroes = [  
  'Batman',
```

```
'Superman'  
];  
  
// good  
const hero = {  
  firstName: 'Dana',  
  lastName: 'Scully',  
};  
  
const heroes = [  
  'Batman',  
  'Superman',  
];
```
