

The API Gateway

Signify has several APIs that offer powerful extensions to the products used.

Any of the APIs' data can be accessed using a valid authentication token

[How to generate an authentication token](#)

The API documentation for each can be seen below,

Identity API

The API responsible for authentication of user data. Use this API to generate the required access token for all other services.

CONTINUE

Account API

The API responsible to access details about the tenant, ruleset and it's users.

CONTINUE

Job Profiler API

The API responsible to access about the job profiles, org structures and people groups.

CONTINUE

Content Management API

The API responsible to manage the files used on the system.

CONTINUE

Notification API

The API responsible for the creation and sending of notifications.

CONTINUE

Import API

The API responsible for import content into the system.

CONTINUE

Performance Management API

The API responsible for management of user performance agreements.

CONTINUE

Report Builder API

The API responsible for delivering report results.

CONTINUE

Master Data API

The API responsible for maintaining master data.
